

Autonomous Third-Party Risk Management for Healthcare Providers with SAFE

Healthcare's growing digital ecosystem, spanning EHR providers, cloud platforms, billing vendors, medical device suppliers, and countless business associates, has made third-party risk one of the sector's most urgent threats.

When vendors fail, hospitals suffer directly: 70% of healthcare organizations have experienced EHR or clinical system downtime due to third-party issues, disrupting workflows, delaying care, and impacting patient safety.

Key Challenges in TPRM for Healthcare Providers:

- **Vendor Ecosystem Complexity**
Thousands of third parties and medical device suppliers create blind spots in PHI exposure and operational risk
- **Manual Effort and Small Teams**
Security teams are small and overwhelmed compared to the size of their third-party ecosystem
- **Regulatory and Compliance Pressures**
Complex regulations (HIPAA, ONC, CMS, FDA) demand timely reporting and defensible evidences
- **Risk Gaps with Static Visibility**
Lack of continuous monitoring leaves blind spots which can trigger care disruptions, losses and investigations
- **Concentration Risk of Critical Third-Parties**
Lack of redundancies lead to large-scale shutdowns of clinical systems and emergency care

SAFE TPRM Highlights

- 💡 **Autonomous TPRM Based on Agentic AI**
SAFE TPRM uses intelligent AI agents to automate onboarding, assessment, and monitoring that help protect PHI and clinical systems.
- 💡 **Risk-Based TPRM for Patient-Critical Third Parties**
Prioritize vendors based on their true cyber risk and potential impact on patient care, EHR uptime, and financial exposure—not arbitrary scores.
- 💡 **All-in-one TPRM Platform**
Connect all aspects of healthcare TPRM—including security ratings, questionnaires, BAAs, SBOMs, and vendor workflows—into one integrated platform.
- 💡 **Meet Regulatory and Compliance Requirements**
SAFE brings transparency and rigor to healthcare compliance requirements like HIPAA, HITRUST CSF, and ONC/FDA controls.
- 💡 **Scalable Third-Party Risk Management**
Grow your clinical and subcontractor ecosystem without adding to headcount with SAFE's flat pricing and scalable TPRM approach.

SAFE Reimagines TPRM

SAFE TPRM brings real automation, real insight, and real results to third-party risk. It redefines how healthcare providers manage third-party risk – delivering the only fully Agentic AI-driven end-to-end TPRM platform on the market. With SAFE TPRM, healthcare providers can achieve:

- Zero-effort TPRM operations managed via truly agentic AI workflows
- 100% automated, continuous, and scalable risk assessments
- AI-Powered TPRM scaling so your third-party ecosystem can grow with minimal additional resources

Trusted by Leading Healthcare Providers

Why Leading Healthcare Providers Choose SAFE

1. Discover all shadow third-parties, contractors and subcontractors

SAFE automatically discovers all vendors and subcontractors accessing EHI, classifies and tiers them, and surfaces contract gaps—helping providers reduce missed or misclassified vendors and lowering OCR audit and remediation risk.

2. Continuous Monitoring for Measurable Risk Reduction

By continuously monitoring breach feeds, leaked credentials, and exploited device vulnerabilities tied to vendor profiles, SAFE allows healthcare providers to detect vendor compromise faster, reducing patient-care disruption.

3. Evidence & Contract Automation; Regulatory & Audit Readiness

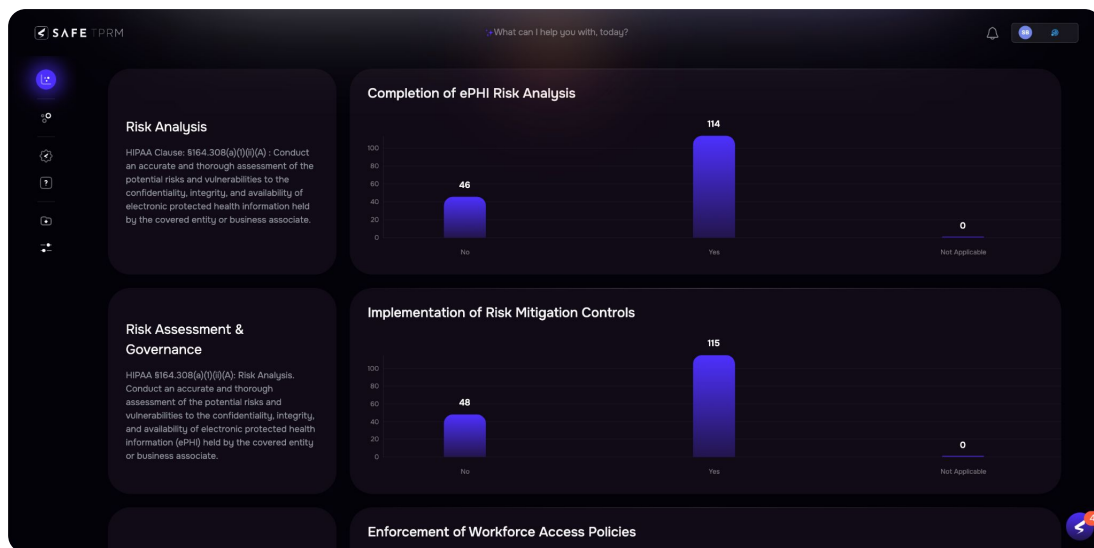

SAFE parses evidence, maps it to controls, and provides pre-built HIPAA, Texas HB300, HITRUST, and ISO dashboards with audit-ready exports and breach-impact timelines—saving audit hours, speeding regulatory responses, and reducing penalty exposure.

4. Speed & Scale of Managing Third-Party Risks with Agentic Workflows

SAFE's Agentic Workflows automate the exact third-party risk processes your team follows today – making them faster, more consistent, and easier to scale. Automate Business Associate onboarding, evidence collection, reassessments, and continuous monitoring across all vendors, with added focus on clinical and PHI-handling vendors.

5. Resilience & Clinical Continuity

SAFE identifies concentration risks and vendor redundancies across critical clinical systems, recommending mitigation steps that help minimize clinical downtime, reduce canceled procedures, and protect patient-care continuity.

Ready to Transform Your TPRM Journey?

In the wake of incidents like the UnitedHealth/Change Healthcare breach, SAFE TPRM's proactive and comprehensive approach has become essential in the healthcare industry. Our platform's 100% autonomous third-party risk management approach enables you to truly focus on the risks that matter across clinical systems, cyber-physical systems, cloud partners, and regulations.

See [SAFE TPRM in Action](#) or [schedule your 1:1 demo](#). SAFE is available on AWS Marketplace.
